SAGA SpA and the evolution of "SAGA Project"

Our rapid progress over almost 3 decades of growth has taken us from local mould makers and injection moulding experts to international innovators, providing a 360 degree service to our clients. We offer the full range from mould design and production to product design and moulding, assembly, packaging and logistics management.

This total partnership concept has two principle objectives:
"Everything is possible" and "Zero Waste".

SAGA Project is the excellence of SAGA SpA. Every operative stage is preceded by preventative analysis and is then executed using the latest and highest technology available in production processes, made to measure equipment and top quality raw materials. Client feedback is constant. Highly trained staff teams monitor automation, robots, laser controls and telecamera checking.

The result is perfection performed on each product introduced into our process of "engineering ideas".
